Due to continuous development of the product aimed at the improvement of its reliability and operating conditions there may be some negligible discrepancies between the product design and its description in this publication.

To the Customer's Notice

Check the completeness of the motorcycle set. Each motorcycle is sold complete with:

1. Certificate.
2. Operating Instructions.
3. Brief Instructions on the Use of Storage Batteries.
4. Tool Kit.
5. Spare Parts Kit.

Due to the constant development of the motorcycle design some minor modifications not indicated in this manual can be expected in the purchased machine.

Before starting motorcycle operation do not fail to fill the air cleaner bath with 150 cm^3 of oil.

To avoid burning through of the silencer in case of the engine operation on too rich mixture and with late ignition advance angle, care should be taken to correctly adjust the carburattor and to set the ignition advance angle (see "Adjusting the Carburettor" and "Ignition Timing").
